Hello;I feel that Radio does not need government protection, they only need regulation.

I feel that as an XM listner that this and other sattelite services should be able to provide local information, weather ,traffic information ect.

why should radio have a monopoly on this kind of information.

As with the RIAA they and Radio continually try to squash competition and or technology for their own benefit.

Basically improve their content and programming or go away, that is why we use XM we get what we want when we want.
